SUMMARY

AI Developer & Python Engineer specializing in deploying generative AI applications, prompt engineering, and autonomous agent systems. Proven capability in Retrieval-Augmented Generation (RAG) paradigms, semantic search databases, and cloud-backed microservices

TECHNICAL SKILLS

Programming Languages: Python, JavaScript, HTML, CSS, SQL

Frameworks & Libraries: React.js

AI Tools & Platforms: Google Antigravity IDE, Google AI Studio, Claude AI

Database: Firebase

Cloud & Deployment: AWS (Amazon Web Services), Cloudflare, Domain Registration & DNS Management

Other Skills: SEO (Search Engine Optimization), Full-Stack Development

PROJECTS

School ERP Management System (React, FastAPI, Supabase, Firebase)

- Designed and developed a modern School ERP platform for managing students, attendance, fees, examinations, and academic records.
- Integrated secure authentication, real-time database operations, and role-based access for administrators, teachers, and students.
- Built responsive dashboards with clean UI/UX for efficient school administration.

AI Portfolio Website (React, Tailwind CSS, Firebase, Gemini API)

- Created a personal portfolio showcasing projects, certifications, hackathons, and technical achievements.
- Added an AI assistant that answers visitor questions about skills, experience, and projects in real time.
- Optimized performance, responsiveness, and SEO for faster loading and better user engagement.

Algonex – Intern Management Website

- Developed a full-stack intern management platform using React.js for the frontend and Python for the backend, accelerated with the Google Antigravity IDE.
- Registered and configured a custom domain, implemented SEO best practices to improve search visibility.
- Deployed the application on AWS Cloud with Cloudflare for content delivery, security, and performance optimization

ACHIEVEMENTS

- Participated in Microsoft Global Fabric Days 2026, gaining hands-on exposure to Microsoft Fabric, data engineering, and AI-powered analytics.
- Actively participated in AI, Python, and UI/UX hackathons, collaborating to build innovative, real-world solutions under time constraints.

EXPERIENCE

Python AI Developer

Jan 2026 – Present

Algonex IT Solutions

- Applied theoretical knowledge to build industry-ready projects, strengthening practical skills in Python and AI-assisted development.
- Developed industry-relevant technical skills through real-world project execution as part of the internship program
- Contributed to the development of the Algonex Intern Management full-stack web application.

EDUCATION

B.Com (Computer Applications)

Emeralds Degree College 2026 Passout
